Assignment Name: BreakAPlate

Error Log Entry

What error message did you encounter (if any)?

- "Syntax error on token ")", { expected"
- No error message on logic error

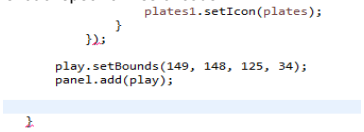
What unexpected behavior did your program exhibit?

- It would not run the code due to a syntax error
- The prize images would continually display even when they were not supposed to be due to the player 'losing' the game. Resulting in the output being incorrect in terms of the code.

What caused the issue? (e.g., syntax error, logic error, incorrect function usage, etc.)

- syntax error
- logic error

Include a screenshot of specific lines of code.



```
            plates1.setIcon(plates);
        }
    });

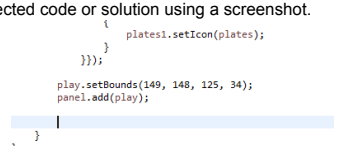
play.setBounds(149, 148, 125, 34);
panel.add(play);

}
```

How did you fix the issue?

- I added a curly bracket
- Within my "else if" statement I made sure that after the player 'lost' the game it would reset the prize image to none, meaning that even if the user played multiple times it would always result in the correct image

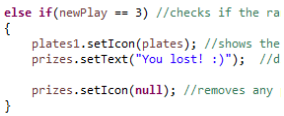
Provide the corrected code or solution using a screenshot.



```
        {
            plates1.setIcon(plates);
        }
    });

play.setBounds(149, 148, 125, 34);
panel.add(play);

}
```



```
else if(newPlay == 3) //checks if the ra
{
    plates1.setIcon(plates); //shows the
    prizes.setText("You lost! :)");  //d

    prizes.setIcon(null); //removes any
}
```
